One font lets you create 2-letter monograms in a unique retro-future style. There are several options included so you can experiment with your particular monogram.

1. Install the font like any other. Unsure how? Google “install fonts in [my operating system.]” After installing, restart the application you want to work in.

2. Type the large letter using the uppercase keys (**A-Z**.) Follow the keystrokes in red at right to create the monogram as seen at the far right.

3. Then type the inner letter using the lowercase keys (**a-z**.) This produces a white letter within a black circle.

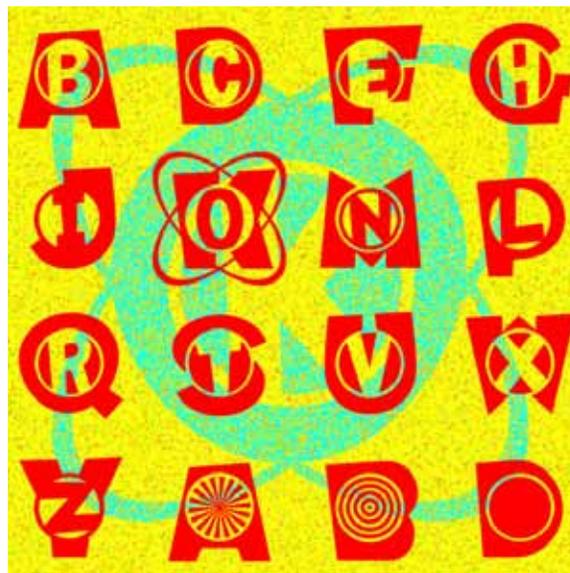

4. If you'd prefer a black letter within a white circle, locate that using the chart below.

5. If you'd like to enclose the inner letter with a ring, type / between the letters.

6. If you want a larger ring that eliminates the white space between the outer and inner letters, type ? between the letters.

7. If you want the electron orbits, type those first using the < key.

8. If you're using a single large letter, you can fill it in with , . or > instead of the lowercase letter.

|     |      |          |          |
|-----|------|----------|----------|
| A 1 | H 8  | O %      | V = or + |
| B 2 | I 9  | P ^      | W [ or { |
| C 3 | J 0  | Q &      | X ] or } |
| D 4 | K !  | R *      | Y \ or   |
| E 5 | L @  | S (      | Z ; or : |
| F 6 | M #  | T )      |          |
| G 7 | N \$ | U - or _ |          |
