MFC Enschede Borders Guidebook

The inspiration source for MFC Enschede Borders is a collection of floral border treatments from the 1904 "Ornamenten Hoofdlijsten en Sluitstukken" by Joh. Enschedé & Zonen, Haarlem. For the first time, this decorative border collection is available digitally.

You can start with a new document or work on a new layer within an existing document. Select MFC Enschede Borders from the font menu. (Some users may have font previewing enabled in the font menu which will cause the font name to appear as border elements, disable this option in order to choose the name)
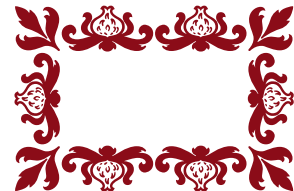

Make certain that the point size of the font is the same as the leading being applied to the font so the borders will meet up properly. While we've adjusted this within the font, your program may override these settings. For instance a 12 point font should have 12 points of leading.

Below is a side-by-side letter to border legend so you can easily start building your decorative frames right away.
